Frontend. Design. Product. I build digital experiences from concept to launch across SaaS portals, websites, and unconventional tech stacks, leveraging AI-driven solutions.

Remote   English   Ukraine/Kyiv

Experience

Yoxel, Inc

Product Designer & Frontend developer

February 2023 - Present

Product Designer

Conducted user interviews and created Customer Journey Maps, identifying key friction points and shaping the product roadmap. Designed new functionality and end-to-end UX/UI for the web app, improving usability and feature adoption. Produced marketing materials and developed product websites (Aurinko.io, Yoxel.com, Threadbot.io), strengthening the company's digital presence.

Frontend developer (two legacy projects on Angular and Scala.js)

Set up CI/CD pipelines and maintained Gmail and Outlook add-ons built with Angular, delivering new features and improving reliability for end users. Configured Webpack builds for Google Manifest V3, ensuring compatibility and smooth deployments. Maintained the web app on Scala.js, migrated legacy modules to new Aurinko components, and optimized page logic, improving performance and overall stability of the platform.

ArcelorMittal Ukraine

Product Designer & Frontend developer

January 2018 – February 2023

Product Designer

Designed marketing and corporate materials, sales kits, event collateral, and merchandise, strengthening brand consistency across all communication channels. Developed logos and visual identities for company sub-projects. Created motion graphics for video content used in marketing campaigns and product presentations. Designed a UI kit and UX for the corporate website and prepared technical specifications for external contractors, accelerating development and ensuring design accuracy in delivery.

Frontend developer (two legacy projects on Angular and Scala.js)

Built and deployed the corporate news site and official company website using Nuxt.js (v2/3) and WordPress, improving performance and overall user experience. Configured the server, installed required dependencies, and launched production environments, ensuring stable, secure, and scalable operation of both platforms.

GAGARIN-WEB

Graphic designer & web development

January 2016 – February 2018

Graphic designer

Created illustrations and designed marketing and corporate materials, sales kits, event collateral, and merchandise, ensuring consistent visual communication across projects. Developed brand identities that strengthened product recognition and improved overall visual coherence.

Web development

Created landing pages using Bootstrap and managed an online store built with WooCommerce on WordPress, improving site usability and ensuring smooth daily operations.
